Welcome to my project WLED! ✨

A fast and feature-rich implementation of an ESP32/ESP8266 webserver to control NeoPixel (WS2812B, WS2811, SK6812) LEDs or also SPI based chipsets like the WS2801 and APA102!

⚙️ Features

- WS2812FX library integrated for over 100 special effects
- FastLED noise effects and 50 palettes
- Modern UI with color, effect and segment controls
- Segments to set different effects and colors to parts of the LEDs
- Settings page - configuration over network
- Access Point and station mode - automatic failsafe AP
- Up to 3 LED outputs per ESP8266 instance and up to 10 LED outputs per ESP32 instance
- Support for RGBW strips
- Up to 250 user presets to save and load colors/effects easily, supports cycling through them.
- Presets can be used to automatically execute API calls
- Nightlight function (gradually dims down)
- Full OTA software updatability (HTTP + ArduinoOTA), password protectable
- Configurable analog clock + support for the Cronixie kit by Diamex
- Configurable Auto Brightness limit for safer operation
- Filesystem-based config for easier backup of presets and settings
- Native Home-Assistant integration: ADD INTEGRATION TO MY

💡 Supported light control interfaces

- Community driven mobile applications
- WLED Native app made by community member Moustachauve
  - For Android [Source]
  - For iOS [Source]
- JSON and HTTP request APIs
- MQTT
- Blynk IoT
- E1.31, Art-Net, DDP and TPM2.net

- Hyperion
- UDP realtime
- Alexa voice control (including dimming and color)
- Sync to Philips Hue lights
- Adalight (PC ambilight via serial) and TPM2
- Sync color of multiple WLED devices (UDP notifier)
- Infrared remotes (24-key RGB, receiver required)
- Simple timers/schedules (time from NTP, timezones/DST supported)

📲 Quick start guide and documentation

See the getting started page!

On this page you can find excellent tutorials made by the community and helpful tools to help you get your new lamp up and running!
